(54) Title: A FASTENING

(57) Abstract: A fastening is disclosed which comprises a bolt (10). The bolt (10) has a head (11) and a threaded shank (12) extending from the head (11). The threaded shank (12) is dimensioned to co-operate with a predetermined threaded bore and the free end of the shank (12) remote from the head (11) is provided with an end cap (20). The end cap (20) has a yieldable formation (22) to engage frictionally with the threaded bore. Preferably, the end cap (20) is a separate component which is secured to the bolt (10) in a rotatable manner.
